

CLOSE PERMIAN LAND DEALS FASTER.

Learn how an E&P company partnered with Drillinginfo to accelerate their land acquisition strategy and conduct title research in a fraction of the time.

Case Study

How a major E&P company closes deals faster and saves money in the Permian.

Overview

With activity and competition in the Permian booming, a leading E&P company was looking for a way to gain a competitive advantage in securing the best acreage.

Historically, the only way to beat competitors to land in a hot play has been through dedicating months of time, outsourcing manpower, and spending a lot of investment dollars.

While the promise of the Permian and the recovery of commodity prices justified a significant investment,

the pain from the downturn was still fresh. They knew they needed to improve their approach to finding open acreage in less time and lower cost.

The E&P company partnered with Drillinginfo to accelerate their land acquisition strategy and conduct title research in a

fraction of the time. The partnership resulted in having to hire less contractors and reduce their overhead on hotels, mileage and per diem since most of the work could be done remotely.

The Challenge

How do I stay ahead of the competition in locating open acreage while reducing costs and using resources more efficiently?

The Solutions

Using the Drillinginfo web app and DI Courthouse the customers' land department was able to automate their monitoring of leases in their custom Area of Interest (AOI), identify lease acquisition targets, and conduct title research in hours not days.

Products Used

- DI Plus
- DI Courthouse
