

The Drillinginfo Web App: Well Data

Access All of Your Subsurface Data From a Single Platform

Search for, view, and export multiple subsurface datasets through a single source. Through the Drillinginfo web app, all Drillinginfo subscribers will have access to well data features that simplify and streamline workflows. Within minutes, customers will be able to filter to a specific well, view the associated well logs and directional surveys, and export critical subsurface information to DI Transform or other geological software in a single file.

The screenshot displays the Drillinginfo web application interface. On the left, there is a sidebar with various filters and controls. The main area shows a map with well locations marked by icons. A pop-up window provides detailed information for a selected well. Below the map, there is a table listing well data, and a 'Well Card' section showing specific details for a well.

Filter Sidebar (Left):

- EXPLORE
- LEASES: Total: 4,895,801
- PRODUCING WELLS: Total: 547

Highlights

- Access disparate subsurface data sets from a single platform
- Search for, view, and export 70,000+ digital well logs and directional surveys
- Filter to specific wells by perforated interval length and to wells with associated additional information, such as well log or directional survey

Geologists and engineers no longer need to search for data in different platforms and manage multiple export files. Now, customers can find all of their subsurface data in a single place.

Features and Benefits

Feature	Benefit
Digital Well Log Viewer	Search for and view well logs (LAS) within a single platform
Directional Survey Exports	Search through 74,000+ deviation surveys and export into geological modeling software for 3D visualization
Additional Well Filtering Options	Customers can now filter to individual wells by perforated interval length and to wells with associated additional information such as well log or directional survey
DI 297 Exports	Export multiple datasets in a single file that can be consumed by DI Transform or other geological software
Well Log Exports	Search through 72,000+ LAS files and export into geological modeling software for 3D visualization

Technical Requirements

DI Software Prerequisites	DI Basic, DI Plus, or DI Pro Subscription
Internet and Computer Software	Internet connection, current Windows or Apple operating system
Computer Hardware	Windows PC or Apple computer
Browsers	Firefox, Google Chrome, Internet Explorer (version 11 or newer)

PROACTIVE

EFFICIENT

COMPETITIVE

By monitoring the market, Drillinginfo continuously delivers innovative oil & gas solutions that enable our customers to sustain a competitive advantage in any environment.

Drillinginfo customers constantly perform above their competitors because they are more efficient and more proactive than the competition.
